SquaredUp

Coffee Break Webinar Series

Application Dashboards

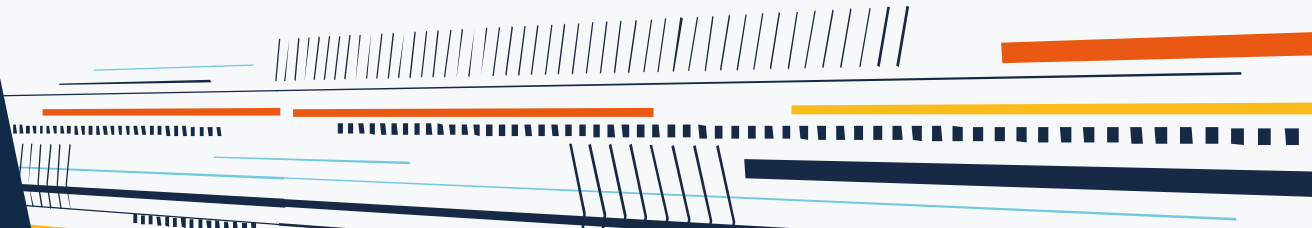

Topic

Monitoring full stack applications using Squared Up

Discussion points:

- Monitoring Scope and Audience
- Application modelling
- Dashboards or Perspectives

Monitoring scope and Audience

You may need to create multiple dashboards to address all your audiences and their differing needs

- Application Owners / Business users want to see overall application Status for app **functionality**
- Subject matter experts want to see **full-stack** monitoring for a total availability picture
- Platform owners need in-depth information on **their** technology

Application Modelling

Application monitoring requires a definition of an application and its dependencies

In SCOM this is typically a Distributed Application.

Suggested Workflow:

- Use VADA to map your application
- Export the model as a Distributed Application and import into SCOM
- Build dashboards and perspectives on top of that DA

Dashboards or Perspectives

New to v3, **perspectives** give you a number of different ways of visualising data

- Dashboards
 - Accessible only via navigation bar
 - No context
 - Hard to re-use
- Perspectives
 - Shown when viewing object/alert
 - Access to target object/alert **context**
 - Can apply to many objects, acting as a template

Demo

Building dashboards for an internal Application

Use Dashboards and Perspectives to create a series of dashboards for an Application owner and their team
